

## General & Navigation

### General Actions

<b>Cmd + N</b>	New Query tab
<b>Cmd + Shift + N</b>	New Connection
<b>Cmd + T</b>	New Tab
<b>Cmd + W</b>	Close Tab
<b>Cmd + Q</b>	Quit TablePlus
<b>Cmd + S</b>	Save current file/query
<b>Cmd + P</b>	Quickly Switch Between Tabs/Files
<b>Cmd + ,</b>	Open Preferences

### Navigation Within Tabs

<b>Cmd + Option + Left/Right Arrow</b>	Switch between tabs
<b>Cmd + Option + Up/Down Arrow</b>	Switch between Panes (Query/Results)
<b>Ctrl + Tab</b>	Cycle through tabs
<b>Cmd + K</b>	Quick Look for selected object (Table/View/Function)
<b>Cmd + Shift + D</b>	Change current database
<b>Cmd + J</b>	Jump to anything (tables, views, queries, etc.)
<b>Esc</b>	Deselect row/cell, close find panel, exit full screen
<b>F2</b>	Rename selected object

### Search & Filtering Data

<b>Cmd + F</b>	Find in current tab/document
<b>Cmd + Option + F</b>	Replace in current tab/document
<b>Cmd + Shift + F</b>	Find in all files
<b>Cmd + Shift + R</b>	Replace in all files
<b>Cmd + L</b>	Go to line (in SQL editor)
<b>Cmd + Shift + G</b>	Filter data rows
<b>Cmd + Shift + P</b>	Show TablePlus commands

## SQL Editor

### Query Execution & Formatting

<b>Cmd + R</b>	Run current query
<b>Cmd + Shift + R</b>	Run all queries
<b>Cmd + Return</b>	Run current query (Alternative)
<b>Cmd + B</b>	Format Query
<b>Cmd + /</b>	Comment/Uncomment line(s)
<b>Cmd + Option + /</b>	Comment/Uncomment block
<b>Cmd + Shift + H</b>	Show Query History
<b>Cmd + Shift + E</b>	Explain Query Plan

### Editing & Autocomplete

<b>Tab</b> or <b>Enter</b>	Accept autocomplete suggestion
<b>Esc</b>	Dismiss autocomplete suggestion
<b>Option + Delete</b>	Delete word backward
<b>Option + Forward Delete</b>	Delete word forward
<b>Ctrl + Space</b>	Trigger autocomplete manually
<b>Cmd + Left/Right Arrow</b>	Go to beginning/end of line
<b>Option + Left/Right Arrow</b>	Go to beginning/end of word
<b>Shift + Click</b>	Select rectangular block of text

### Multi-Cursor Editing

<b>Option + Click</b>	Add new cursor at click location
<b>Ctrl + Shift + L</b>	Select all occurrences of the current word
<b>Cmd + D</b>	Select next occurrence of current word/selection
<b>Cmd + U</b>	Unselect last occurrence
<b>Option + Shift + Up/Down Arrow</b>	Add cursor above/below and select current line
<b>Esc</b>	Remove all extra cursors

## Data & Structure

### Data Grid Actions

<b>Cmd + N</b>	Add New Row
<b>Cmd + Delete</b>	Delete Selected Row(s)
<b>Cmd + D</b>	Duplicate Selected Row(s)
<b>Cmd + S</b>	Commit changes
<b>Esc</b>	Discard unsaved changes
<b>Return</b>	Edit cell
<b>Shift + Return</b>	Save cell edit
<b>Cmd + C / Cmd + V</b>	Copy/Paste cells or rows
<b>Cmd + Shift + V</b>	Paste with headers (useful for copying from spreadsheet)

### Structure View Actions

<b>Cmd + N</b>	Add new column/index/relation
<b>Cmd + Delete</b>	Delete selected item
<b>Cmd + S</b>	Apply structure changes
<b>Esc</b>	Discard structure changes
<b>Tab</b>	Navigate between input fields when adding/editing item
<b>Shift + Tab</b>	Navigate backward between input fields
<b>Return</b>	Save/add item after editing fields
<b>Cmd + Option + P</b>	Toggle Foreign Key panel visibility

### Import / Export

<b>Cmd + I</b>	Import Data
<b>Cmd + E</b>	Export Data
<b>Cmd + Shift + I</b>	Import from Database
<b>Cmd + Shift + E</b>	Export to Database
Use drag & drop	Drag CSV/JSON/SQL files onto a table tab to import
Use clipboard	Copy data rows and paste directly into a spreadsheet or text editor
Export results	After running a query, select results and use <b>Cmd+E</b> to export just the results

## Tips & Advanced

### Useful Quick Actions

<b>Toggle Sidebar:</b> <b>Cmd + 1</b>	Quickly show or hide the connection sidebar.
<b>Toggle Console/Output:</b> <b>Cmd + 2</b>	Show or hide the result/console area at the bottom.
<b>Toggle Structure/Content:</b> <b>Cmd + 3</b>	Switch between data grid, structure, and relations view for a table.
<b>Focus Filter:</b> <b>Cmd + Option + F</b> (in sidebar)	Quickly jump to the filter box in the sidebar to search for tables/databases.
<b>Quick Look:</b> <b>Cmd + K</b>	View basic info (columns, index, etc.) of a selected table/view/function without opening a new tab.
<b>Open in New Window:</b> <b>Cmd + Shift + O</b>	Open the current connection or selected object in a new window.
<b>Maximize Pane:</b> Double-click split bar	Double-clicking the bar between editor/results or sidebar/content will maximize one pane.
<b>Show TablePlus Commands:</b> <b>Cmd + Shift + P</b>	If you forget a shortcut, use this search bar to find and execute any TablePlus command.
<b>Custom Shortcuts:</b> Go to <b>Preferences &gt; Keybindings</b>	TablePlus allows you to customize almost all keyboard shortcuts.

### Advanced SQL Editor Tricks

<b>Column Selection:</b> <b>Option + Drag Mouse</b>	Select a vertical block of text for editing (column mode).
<b>Move Line:</b> <b>Option + Up/Down Arrow</b>	Move the current line or selected lines up or down.
<b>Duplicate Line:</b> <b>Cmd + Shift + D</b>	Duplicate the current line or selected lines.
<b>Join Lines:</b> <b>Ctrl + J</b>	Join the current line with the next line.
<b>Insert Cursor Above/Below:</b> <b>Option + Cmd + Up/Down Arrow</b>	Add a cursor directly above or below the current cursor.
<b>Go to Matching Bracket:</b> <b>Ctrl + M</b>	Jump to the matching parenthesis, bracket, or brace.
<b>Toggle Case:</b> <b>Cmd + Shift + U</b>	Cycle selection through UPPERCASE, lowercase, Capitalize.
<b>Wrap Selection:</b> Select text, then type <b>(, [, {, ', or "</b>	The selected text will be wrapped by the typed character pair.
