

Basic Commands & Concepts

Artisan Commands

<code>php artisan --version</code>	Display the Laravel version.
<code>php artisan make:controller ControllerName</code>	Create a new controller.
<code>php artisan make:model ModelName</code>	Create a new Eloquent model.
<code>php artisan make:migration create_table_name_table</code>	Create a new migration file.
<code>php artisan migrate</code>	Run pending migrations.
<code>php artisan migrate:rollback</code>	Rollback the last migration.
<code>php artisan serve</code>	Start the built-in PHP development server.
<code>php artisan tinker</code>	Enter the interactive Tinker shell.
<code>php artisan route:list</code>	Display all registered routes.

Directory Structure

<code>app/</code>	- Contains the core code of your application.
<code>bootstrap/cache/</code>	- Framework bootstrap files.
<code>config/</code>	- Application configuration files.
<code>database/</code>	- Database migrations and seeds.
<code>public/</code>	- Publicly accessible files (CSS, JavaScript, images).
<code>resources/views/</code>	- Application views (Blade templates).
<code>routes/</code>	- Route definition files (web.php, api.php).
<code>storage/</code>	- Storage directory for files and sessions.

Routing and Controllers

Basic Routing

```
Route::get('/route', function () {
    return 'Hello, World!';
});

Route::post('/route', function () {
    // Handle POST request
});
```

Route Parameters

```
Route::get('/user/{id}', function ($id) {
    return 'User ID: ' . $id;
});

Route::get('/user/{name?}', function ($name = null) {
    return 'Name: ' . $name;
});
```

Controllers

```
Route::get('/users', 'App\Http\Controllers\UserController@index');

namespace App\Http\Controllers;

use App\Http\Controllers\Controller;

class UserController extends Controller
{
    public function index()
    {
        return view('users.index');
    }
}
```

Eloquent ORM

Basic Model Operations

<code>\$users = App\Models\User::all();</code>	Get all records.
<code>\$user = App\Models\User::find(1);</code>	Find a record by primary key.
<code>\$user = new App\Models\User;</code> <code>\$user->name = 'John Doe';</code> <code>\$user->email = 'john@example.com';</code> <code>\$user->password = bcrypt('secret');</code> <code>\$user->save();</code>	Create a new record.
<code>\$user = App\Models\User::find(1);</code> <code>\$user->name = 'Jane Doe';</code> <code>\$user->save();</code>	Update an existing record.
<code>\$user = App\Models\User::find(1);</code> <code>\$user->delete();</code>	Delete a record.

Relationships

One To One : A user has one profile.	<pre>public function profile() { return \$this->hasOne('App\Models\Profile'); }</pre>
One To Many : A user has many posts.	<pre>public function posts() { return \$this->hasMany('App\Models\Post'); }</pre>
Many To Many : A post has many tags.	<pre>public function tags() { return \$this->belongsToMany('App\Models\Tag'); }</pre>

Blade Templating

Basic Syntax

<code>{{ \$variable }}</code>	Display a variable (automatically escaped).
<code>{!! \$variable !!}</code>	Display a variable without escaping.
<code>@if (condition)</code> <code>@endif</code>	Conditional statement.
<code>@foreach (\$items</code> as <code>\$item)</code> <code>@endforeach</code>	Looping.

Components and Layouts

<code>@extends('layouts.app')</code>	- Extend a layout.
<code>@section('content')</code> ... <code>@endsection</code>	- Define a section.
<code>@include('partials.header')</code>	- Include a partial view.
<code>@component('components.alert')</code> ... <code>@endcomponent</code>	- Render a component.

Directives

<code>@auth</code> ... <code>@endauth</code>	Check if the user is authenticated.
<code>@guest</code> ... <code>@endguest</code>	Check if the user is a guest.
<code>@csrf</code>	Generate a CSRF token field.
