

Core Concepts & Setup

Installation

Install Sinatra via RubyGems:

```
gem install sinatra
```

For logging:

```
gem install sinatra-contrib
```

Basic Structure

A simple Sinatra application structure:

```
require 'sinatra'

get '/' do
  'Hello, world!'
end
```

Running the app:

```
ruby your_app.rb
```

Configuration

<code>set :port, 8080</code>	Sets the port the application listens on.
<code>set :environment, :production</code>	Sets the environment (development, production, test).
<code>enable :sessions</code>	Enables session support.

Routing

HTTP Methods

<code>get 'path'</code>	Handles GET requests.
<code>post 'path'</code>	Handles POST requests.
<code>put 'path'</code>	Handles PUT requests.
<code>delete 'path'</code>	Handles DELETE requests.
<code>patch 'path'</code>	Handles PATCH requests.
<code>head 'path'</code>	Handles HEAD requests.
<code>options 'path'</code>	Handles OPTIONS requests.

Route Parameters

Accessing parameters from the route:

```
get '/hello/:name' do
  # Matches /hello/foo and /hello/bar
  # params[:name] will be 'foo' or 'bar'
  "Hello #{params[:name]}!"
end
```

Optional parameters:

```
get '/posts/:id?' do
  # Matches /posts/123 and /posts
  # params[:id] will be '123' or nil
end
```

Splats (capturing multiple segments):

```
get '/download/*/*' do
  # Matches /download/path/to/file.txt
  # params[:splat] will be ['path/to', 'file.txt']
end
```

Views & Templates

Rendering Views

Rendering a view:

```
get '/' do
  erb :index
end
```

This will render `views/index.erb`.

Specifying a different template path:

```
get '/' do
  erb :index, :views => settings.template_path
end
```

Template Engines

<code>erb</code>	Embedded Ruby templates.
<code>haml</code>	Haml templates (requires <code>haml</code> gem).
<code>slim</code>	Slim templates (requires <code>slim</code> gem).
<code>liquid</code>	Liquid templates (requires <code>liquid</code> gem).
<code>markdown</code>	Markdown templates (requires <code>rdiscount</code> or similar gem).

Layouts

Using a layout:

```
get '/' do
  erb :index, :layout => :default
end
```

This will render `views/index.erb` inside `views/default.erb`.

Disabling layout:

```
get '/' do
  erb :index, :layout => false
end
```

Helpers & Extensions

Defining Helpers

Defining a helper:

```
helpers do
  def bar(name)
    "Hello, #{name}!"
  end
end

get '/' do
  bar('World')
end
```

Built-in Helpers

<code>halt</code>	Immediately stops request processing.
<code>pass</code>	Passes control to the next matching route.
<code>redirect</code>	Redirects the client to the given URL.
<code>'url'</code>	
<code>session</code>	Access the session hash (if sessions are enabled).
<code>params</code>	Access request parameters.

Sinatra Extensions

Using extensions:

```
require 'sinatra/reloader'

configure :development do
  register Sinatra::Reloader
end
```

Common extensions:

- `sinatra/reloader`: Automatic reloading on code changes.
- `sinatra/activerecord`: ActiveRecord integration.
